카드 요약 / 당시 확인 내용

On September 1, 2026, ahead of its planned separation on October 1, 2026, Corteva unveiled the corn pipeline for its advanced seed and genetics spin - off, Vylor. The pipeline includes an industry - first trait designed to improve yield and yield stability, with field trials showing an incremental three bushels per acre on average and gains of up to 10 bushels per acre, alongside advanced insect control to deliver a step - change in production and farmer profitability. Vylor is on track to launch seven new corn technology platforms through 2035, and the corn portfolio is expected to deliver more than \$2 billion in incremental revenue by 2035, including licensing.
