ADAMA announced on September 2, 2026 the launch of Ravari, a dual mode - of - action insecticide for fruit and vegetable growers in Latin America exporting produce to the United States. Ravari combines the complementary strengths of novaluron and CTPR (chlorantraniliprole), delivering two unique modes of action in a water - based SC formulation powered by ADAMA's Ayalon Formulation Technology. By targeting eggs and larvae before pest pressure builds, the product helps break the pest lifecycle early and protect crop quality and yield. Ravari is designed for use across a wide range of fruit and vegetable crops, offering broad - spectrum control of chewing pests, and is recommended for application from flowering through to pre - harvest with a one - day pre - harvest interval for crops such as tomato, providing growers a new resistance management tool for integrated pest management programs.
