카드 요약 / 당시 확인 내용

At the 2026 Farm Progress Show, BASF spotlighted Zidua PLUS herbicide, an upcoming residual herbicide for soybeans that combines two modes of action and provides a flexible application window from pre - plant through post - emergence. Matt Inman, Technical Marketing Manager with BASF, discussed the products and innovations featured at the BASF exhibit. Zidua PLUS is a combination of Zidua (pyroxasulfone) and Pursuit (imazethapyr) and can be applied as a PRE up to V6 in soybeans with a typical use rate of 6 fluid ounces per acre. It provides residual and knockdown control of weeds compared to Zidua alone and more application flexibility than Zidua Pro, aimed at extended weed - control flexibility while supporting resistance management.
