카드 요약 / 당시 확인 내용

BASF SE inaugurated its fully modernized plant for the production of acid chlorides and chloroformates (ACCF) at the Ludwigshafen Verbund site. The investment, amounting to a low three - digit million - euro sum, includes a fundamental renewal of the production infrastructure and increases production capacity at the site by approximately 30%. Customers use ACCF in a broad range of applications including pharmaceuticals, crop protection products, organic peroxides, coatings, plastics and rubber. Since 2025, BASF has produced its entire Ludwigshafen portfolio of around 25 acid chlorides and chloroformates using renewable electricity credits, including all upstream raw material processes, reducing the portfolio's product carbon footprint by an average of 19 percent. BASF operates ACCF production facilities in Ludwigshafen, Germany, and Yeosu, South Korea.
