카드 요약 / 당시 확인 내용

FMC and Corteva signed a co-exclusive strategic supply and license agreement to widen access to FMC's rimisoxafen herbicide technology across North and South American corn and soybean markets. Corteva will make an initial prepurchase payment of \$200 million for active ingredient supplied by FMC, while FMC retains full ownership of rimisoxafen and both firms independently formulate and commercialize their own premix products. Rimisoxafen was recently classified by the Herbicide Resistance Action Committee as the industry's first dual-mode-of-action herbicide, targeting hard-to-control resistant Amaranthus species including Palmer amaranth and waterhemp. First commercial sales are anticipated by the end of the decade, pending regulatory approvals.
