카드 요약 / 당시 확인 내용

On April 10, 2026, China's ICAMA released a batch of proposed new pesticide registrations for public consultation that, for the first time, included RNA interference (RNAi) biopesticides developed by Silicon Gene. The two products, an RNAi 65% technical concentrate and a 2.5% SC suspension concentrate, are designed to control Tobacco Mosaic Virus (TMV). The active ingredient, double-stranded RNA (dsRNA), works by entering pathogen cells and triggering gene silencing to block synthesis of essential proteins. This marks China's first move toward registering RNAi-based crop-protection products.
