카드 요약 / 당시 확인 내용

Syngenta announced the global launch of VIRESTINA herbicide (active ingredient metproxybicyclone) after Argentina became the first country worldwide to grant registration approval. The fourth - generation chemistry controls grass weeds resistant to glyphosate, clethodim and older ACCase herbicides in soybean and cotton, breaks down rapidly in soil, and was developed in about 10 years versus the 12 - 14 year industry average. Syngenta plans to bring the technology next to Brazil, Australia, the U.S. and Canada.
