카드 요약 / 당시 확인 내용

UK farming could lose £ 500m - £ 810m in annual profit (7 - 11% of total UK farming income) if the post - Brexit EU SPS deal forces immediate 'cliff - edge' alignment on crop - chemical rules, expected to complete around June 2027. Products at risk include herbicides bixlozone (Isoflex) and cinmethylin (Luximo) and fungicides isoflucypram (Iblon) and pydiflumetofen (Adepidyn), plus 14 further products with expired EU approvals. Year - one yield declines could reach 16% for wheat, 7% for apples and 6% for potatoes. CropLife UK and the NFU are pushing for phased 'managed alignment' with transition periods rather than immediate adoption.
