카드 요약 / 당시 확인 내용

Commission Regulation (EU) 2026/215 of 29 January 2026 amends Annexes II and V to Regulation (EC) No 396/2005 as regards maximum residue levels for dimoxystrobin, ethephon and propamocarb in or on certain products. The revised MRLs became applicable from 19 August 2026. The approval of the active substance dimoxystrobin was not renewed by Commission Implementing Regulation (EU) 2023/1436 and all existing authorisations for plant protection products containing that active substance have been revoked, so residues must meet the limit of determination. For ethephon the revised MRLs particularly affect exporters of blueberries and tree nuts, where the MRL is reduced to the limit of determination, with reductions also on apples, pineapples, rye and wheat while the MRL for barley is increased. Propamocarb MRLs are revised on products including lettuces.
