카드 요약 / 당시 확인 내용

BASF Agricultural Solutions is investing EUR 15 million in a new Climate Center at its global research headquarters in Limburgerhof, Germany, with construction underway and completion expected in the first half of 2027. The facility will house advanced climate chambers providing precisely controlled environmental conditions for ecotoxicology studies supporting crop protection product registration worldwide, insect breeding for early - stage screening and discovery programs, and development of chemical and biological crop protection products. The investment responds to tightening regulatory requirements for crop protection products and growing demand for high - quality studies conducted under Good Laboratory Practice standards. Melanie Bausen - Wiens, Member of the Management Board, said the new Climate Center is much more than a research facility and is a strategic investment supporting the ambition to combine world - class research with enhanced regulatory capabilities.
