카드 요약 / 당시 확인 내용

More than 50% of globally traded sulfur normally passes through the Strait of Hormuz, and virtually no commercial shipments have transited since the Iran conflict began. Russia's extended sulfur export ban through the end of 2026 removes two of the three largest supply sources simultaneously, tightening sulfuric acid availability across the Americas, Europe and South Asia. Multiple U.S. phosphate facilities have curtailed production and four Mosaic plants reduced output earlier in the summer; phosphate producers cannot operate at full capacity without adequate sulfur regardless of phosphate rock availability. DAP in Illinois reached \$912.22 per ton as of August 7, up 24% over two years. Mosaic settled Q3 sulfur contracts at \$705 per long ton and guided DAP realizations at \$820 - \$840 per metric ton FOB plant. Fertilizer Institute president Corey Rosenbusch emphasized that sulfur is an essential feedstock for sulfuric acid production, which in turn is required to convert phosphate rock into finished fertilizer products, and urged policymakers to recognize sulfur as a critical supply chain bottleneck alongside nitrogen and potash.
