카드 요약 / 당시 확인 내용

Brazil's Federal Regional Court of the 3rd Region (TRF3), Panel 4, ruled unanimously (Case 5021356 - 42.2021.4.03.6100) mandating a nationwide prohibition on aerial application of imidacloprid, clothianidin and thiamethoxam across all crops, compelling regulatory agencies to finish and formally act on assessments. MAPA has 180 days to formalize the aerial ban with updated labels and registrations; Ibama must complete fipronil's environmental re-evaluation within 360 days, after which MAPA has 90 additional days to adopt registration measures. Fipronil's aerial foliage application has been under precautionary ban since 2012, which the ruling preserves pending full review. Ground-based use remains unrestricted and existing registrations remain legal for non-aerial methods, but growers and aerial contractors in major producing states must shift to ground or drone application or substitute alternative chemistries within the compliance window.
