카드 요약 / 당시 확인 내용

At its September 8, 2026 meeting, the European Chemicals Agency's Risk Assessment Committee (RAC) concluded that glyphosate does not warrant a classification for carcinogenicity, upholding the findings of RAC's 2022 hazard assessment — the third time in nine years the committee has reached this conclusion. The determination was made after considering research by the Ramazzini Institute published in 2025 as part of the Global Glyphosate Study, and takes into account comments received during a March 2026 public consultation. RAC concluded the Ramazzini study does not change the conclusions of glyphosate's hazard assessment, in particular the 2022 decision that the substance does not warrant classification for carcinogenicity.
