카드 요약 / 당시 확인 내용

China's pesticide regulator approved 2,133 new product registration certificates in the first half of 2026, up 22.2% year-over-year: 2,005 formulated end-use products (up 23.2%) and 128 technical grade ingredients (up 9.4%). Herbicides accounted for 29.5% of approvals (down from 37.3% in 2020), insecticides 28.9%, fungicides 25.3% (540 certificates, up 39.2% — the sharpest growth) and plant growth regulators 11.6%. Most-approved ingredients included chlorantraniliprole (131), clothianidin (105), pyraclostrobin (101), emamectin (83), tebuconazole (67), prothioconazole (56), glufosinate - P (50), propanil (46) and atrazine (44). The data indicates a market registering more products while shifting toward fungicides, low-toxicity and biologicals-friendly formulation types, and fewer but larger manufacturers.
