카드 요약 / 당시 확인 내용

Fertilizer shipments through the Strait of Hormuz remain near zero as of early September 2026 despite diplomatic progress, per the WTO Hormuz trade tracker. Pre - conflict, Hormuz handled approximately 20% of globally traded nitrogen fertilizer; a near - total cessation continues for ammonia, urea and sulfur exports, with UN data showing urea exports dropped 83% and total trade volumes fell 54%. An Iran - Oman memorandum on safe shipping route coordinates was reached in June 2026, but operators remain reluctant to resume transit, and the broader MoU framework expired in August 2026 without comprehensive agreement. Shipping companies cite lack of comprehensive insurance coverage and absence of clear military security guarantees. Nitrogen prices have corrected substantially from April peaks aided by China's export quota releases, but sulfur remains above \$1,000 per metric ton; phosphate producers in Egypt, Brazil and India have curtailed output, and Middle Eastern producers have diverted volumes through Red Sea/Suez routes at added cost and transit time.
