## 카드 요약 / 당시 확인 내용

Fertiberia expanded NSAFE, described as the world's first bio - based nitrification inhibitor, into the Netherlands and Germany in September 2026, its first Northern European market entry, with Dutch subsidiary Van de Reijt leading commercialization. Unlike synthetic alternatives targeting ammoniacal nitrogen, the microbiological product directly assimilates nitrate into organic structures, releasing nitrogen through decomposition while reducing leaching and volatilization losses. The technology emerged after six years of development and underwent laboratory and field testing with institutions including Wageningen University, Ghent University, Technical University of Madrid and the Spanish National Research Council (CSIC). Fertiberia previously launched NSAFE in Spain in early 2024, followed by France, Portugal and Greece. The expansion aligns with tightening EU nitrogen regulations under the Nitrate Directive, mirroring momentum in North America such as Minnesota's \$1.6 million enhanced - efficiency fertilizer subsidy program.
