카드 요약 / 당시 확인 내용

Global urea prices eased to \$443 per metric ton on September 4, 2026, while remaining 13.6% higher month - on - month and 13.2% year - on - year. Beijing expanded its 2026 export allowance to approximately 5 - 5.5 million tonnes, with July shipments surging to roughly 403,000 tonnes from just 7,000 in June, significantly easing global supply constraints. Positive developments in Strait of Hormuz negotiations have reduced geopolitical supply anxiety. Northern Hemisphere planting has concluded and Brazil has postponed purchases, importing less urea than the previous year. European urea production faces headwinds with Dutch TTF gas above 66.50 euros per megawatt - hour, placing break - even costs for efficient European plants near \$605/tonne ex - works. Future price movement depends on the pace of Hormuz diplomacy, Brazil's return to active purchasing, and the remaining size of China's export quota.
