카드 요약 / 당시 확인 내용

A University of Minnesota Extension podcast episode published September 9, 2026 explores how soil health practices interact with the 4Rs of nitrogen management (right source, rate, time, place) to minimize nitrogen losses to water. Practices include minimizing soil disturbance, maintaining ground cover and promoting biological activity. Nitrogen can mineralize (release) or immobilize (become tied up) in residue depending on soil moisture, temperature and microbial activity. The episode examines biological soil tests like the Haney test and Solvita CO2 burst, questioning whether they provide exact fertilizer rates or should be considered general risk indexes, and emphasizes that strong soil structure and extensive root networks maximize nitrogen uptake efficiency. Contributors: Brad Carlson (Extension educator, Mankato), Dan Kaiser (nutrient management specialist) and Anna Cates (soil health specialist).
